

Special Issue

The Role of Landscape Perspective for Environmental Management

Message from the Guest Editors

It has been recognized that ecosystems and landscapes are the two main spatial units in ecological research, though their concepts often remain vague and overlap when it comes to environmental management purposes. However, the landscape perspective seems more appropriate when dealing with sustainable resource management. Therefore, this Special Issue aims at conceptualizing and discussing the effects of landscape composition and configuration on the space lived, perceived, and managed by humans, with specific reference to the provision of landscape services, taking into account the possible synergies and trade-offs among the provision of services as well as the appropriate spatiotemporal scales. The present Special Issue aims to gather a series of conceptual and empirical manuscripts highlighting that the landscape perspective represents an added value in managing natural resources and enhancing human wellbeing. Papers selected for this Special Issue will be subject to a rigorous peer review procedure with the aim of a rapid and wide dissemination of research results, developments, and applications.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
