

## Special Issue

# Life Cycle Thinking, Sustainability and Circular Economy: Practical Applications and Future Challenges

### Message from the Guest Editors

The United Nations have led the way towards a more sustainable future by setting their 2030 Agenda for Sustainable Development. Moreover, the EU has indicated the transition to Circular Economy (CE) amongst its priorities, thus showing a clear view towards sustainability. With the need to promote sustainability becoming ever more important and current in a milestone year such as 2020, many challenges may arise around how to find synergies among CE, LCT and sustainable development. This Special Issue aims at putting together the knowledge obtained so far on these issues by including case studies and literature reviews within various key economic sectors as well as at taking a glimpse of the future by identifying the key aspects and methodological challenges that such synergies may entail.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
