Special Issue

Sustainable and Resilient Regional Development: A Spatial Perspective

Message from the Guest Editors

Sustainable and resilient regional development has received great attention in the academic literature and public policy areas under the Sustainable Development Goals (SDGs). Regional development has been simultaneously expanding over space and time, taking on path-dependent characteristics. This Special Issue of Sustainability will particularly focus on the spatial dimension of resilient and sustainable regional development. Its scope is mainly centered around the definition, measurement, assessment, and policy actions related to the resilience and sustainability of regional development from the perspective of space. The purpose of this Special Issue is to foster spatially integrated social, economic, environmental, regional, and urban development. With the development of GIS, spatial statistics, and spatial econometrics, we have the methodologies and techniques to collect, analyze, and visualize the evolution of spatial patterns, which provide powerful toolkits in tackling the resilient and sustainable challenges in regional development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
