Environmental Impact Assessment in the Marine Realm: Nutrient Loadings, Eutrophication, Acidification and Pollution

Message from the Guest Editors

The global marine environment has long been deteriorating. Many countries have taken actions to protect marine resources and public health from pollution and restore and enhance the quality of their natural marine environments. Legislative, procedural, and technical strategies have been established for assessing the potential environmental changes. Environmental Impact Assessment (EIA) plays a critical role in these assessments. For this special issue, we encourage both original research articles and reviews highlighting diverse advances in the field of EIA on marine ecosystems, nutrients cycle, acidification, eutrophication and pollution, and countermeasures and challenges to negative impacts in the above topics. Case studies are welcome, and we realize that the resources available to implement an EIA program may limit the breadth and sophistication of the program's implementation. With that in mind, we encourage submissions from developing nations. Finally, in the era of global environmental change, we encourage discussion of efforts in differentiating local effects from those affected by regional or global changes.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
