

## Special Issue

# Microbial Diversity in Cold Environments and Their Sustainable Use

### Message from the Guest Editor

Over 80% of the Earth biosphere is continuously exposed to temperatures below 5 °C, including in the Polar Regions, deep sea, and the Alps. The changing microbial diversity affects material production in the environments. Therefore, it is important to understand the microbial diversity in the environments. In recent years, microorganisms inhabiting these environments have been attracting attention as microbial resources because they have characteristics such as cold-active enzymes and ice-binding protein (antifreeze proteins), material conversion abilities under low temperatures. This special issue will comprise a selection of papers presenting original and mini-review on the diversity of microorganisms inhabiting the cold environments, and the sustainable use of these microbes as microbial resources.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
