Special Issue

Microplastics and Their Potential Effects in Aquatic Organisms and Ecosystems

Message from the Guest Editor

Microplastics are widely reported as a common pollutant of both aquatic and terrestrial environments. Several studies have demonstrated that a wide range of aquatic organisms of varied size and across multiple trophic levels in wild conditions contain microplastics. Ingestion is the most frequent interaction between microplastics and biota and has been predominantly found in marine species. This can result in physical injury inducing inflammation and stress, or it can result in a blockage of absorptive surfaces and subsequent reduced energy intake or respiration. Nevertheless. limited data on the actual exposure, in the field, of aquatic species to microplastics is available. In this Special Issue, we explore the issue of microplastic pollution from marine and freshwater habitats on aquatic organisms, and ask for studies discussing current state-of-the-art research addressing the sources and pathways of microplastics, their accumulation, and potential effects on biota from these ecosystems. Keywords

microplastics
ecotoxicological effects
biota
marine species
freshwater species
aquatic ecosystems
oceans
rivers
pollutants

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
