Special Issue

Advances of Sustainability Research: A Canadian Perspective

Message from the Guest Editors

Human-induced climate change is one of the greatest global crises of our time. The construction industry alone is responsible for producing 36% of the world's total CO2 and 35% of the world's total waste annually. In addition, tons of industrial waste is disposed of in landfills causing environmental pollution. Thus, tackling the waste issue is also a priority. Similarly, the lifecycle of engineering materials is a significant contributor to the environmental footprint with respect to CO2 emissions and other environmental impacts. As such, the circular economy is a novel paradigm to supplant the classic take-make-dispose model. Canadian researchers are developing new sustainable techniques to minimize waste and reduce CO2 emissions across many industries. The scope of which covers material selection and design, functional design practices, manufacturing, operations management, as well as supply chain development and management. The proposed research in this Special Issue is being conducted directly in partnership with community stakeholders, providing application-based and multidisciplinarity contexts for solving pertinent and complex real-world challenges

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
