

Special Issue

Sustainability in the Seafood Chain and Impacts on Product Quality

Message from the Guest Editors

Dear Colleagues: Fisheries and aquaculture are a key global food production system. However, ensuring food production, distribution and consumption in a way that is socially, economically and environmentally sustainable is one of the main challenges of this century and requires a rational and effective use of resources. In this context, this Special Issue is dedicated to papers that focus on 1) strategies applied in seafood supply chains (from harvesting to commercialization) to increase sustainability, and 2) their impact on product quality. Research areas include (but are not limited to) the following themes:

- Sustainable harvesting and production of marine resources (wild and farmed);
- Sustainable industrial development of seafood products: processing, packaging and preservation technologies;
- Quality characterization of seafood products, e.g., physicochemical characteristics (nutritional profile) and sensory properties;
- System analysis methods, including life cycle assessment and management.

We look forward to receiving your contributions. / Dr. Amparo Gonçalves

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
