

Special Issue

Sustainable Management Practices in Supply Chains

Message from the Guest Editor

The focus of this Special Issue is on how sustainable management practices strengthen the environmental, social, and economic performance of supply chains. The scope covers conceptual, empirical, and methodological studies that investigate strategies such as circular economy integration, low-carbon logistics, responsible sourcing, stakeholder collaboration, and data-driven governance. The purpose is to advance theoretical understanding and provide actionable insights for managers and policymakers seeking resilient and resource-efficient supply networks. This collection will supplement and extend the existing literature on sustainable supply chain management, green operations, and corporate social responsibility. By directly engaging with the mission of *Sustainability*, it highlights how innovative management practices contribute to long-term supply chain resilience and measurable progress toward the Sustainable Development Goals. In doing so, it offers a coherent platform for researchers to refine theory and propose practical solutions that move global and regional supply chains toward sustainable development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
