

Special Issue

System Design and Operation in Sustainable Transport Networks

Message from the Guest Editor

In this view, transport networks have assumed a primary role in the development of new transport solutions by ensuring interoperability among different transport systems. The aim of this Special Issue is to publish relevant articles in the field of sustainable transport networks, specifically focusing on the design and operation of transport systems, and their interaction, with the goal to reach sustainability objectives (i.e., social, economic environmental). The scopes are as follows: 1) to focus more on how a transport system is designed and used for achieving sustainable target; and 2) to consider the transport systems within transport networks, i.e., where different transport systems can exist and, under given rules, coexist. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
