

Special Issue

Novel Methods for Restoring Inland Aquatic Ecosystems

Message from the Guest Editors

This Special Issue of Water will be focused on novel methods for restoring eutrophicated aquatic ecosystems. Among all threats that impair water quality, eutrophication has become one of the most common affecting lakes and reservoirs. The use of lake restoration techniques in order to meet the requirements set by environmental policies is increasing from the last 50 years. Although a multi-approach is often required, the keystone of a lake restoration project is the reduction of external P load. After a reduction of external P load, biological resilience and P release from sediment may be responsible for the delay in lake recovery. In such cases, the application of a P inactivation methods is recommended to increase P retention in the sediment. Nowadays there exists not a *panacea* in lake restoration. Papers comprising this special issue should be original contributions focused on different methods for restoring inland aquatic ecosystems, being specially welcome those focussed on case study for identifying advantages and disadvantages of each technique.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
