

## Special Issue

# Circular Economy and Sustainable Business Models: New Knowledge, New Rules

### Message from the Guest Editor

Adopting a circular economy (CE) poses significant technological, organisational and managerial challenges to companies and organisations alike. However, today, much of the research on this is based on linear "take–make–dispose" models rather than circular models oriented toward a more sustainable and regenerative economic system. The integration of the principles of a circular economy into circular business model strategies will create and capture value to steer society's economy and resource management towards slower, more closed material and energy use cycles and higher productivity. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but not limited to) the following:

- Measuring and assessing circular business performance;
- Circular business model typologies;
- Barriers and enablers of circular business adoption;
- Circular supply chain management;
- Circular business models in different industries;
- Circular business model innovation;
- Circular business model scalability;
- Policy and regulatory frameworks; We look forward to receiving your contributions.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
