

Special Issue

Biodiversity Indicators for Ecological and Sustainable Conservation in Forests

Message from the Guest Editors

We invite contributions that address the benefits and challenges of Sustainability of Biodiversity and Ecological Conservation in Forests in managed and unmanaged forests. Monitoring biodiversity in European forests through the study of ecological indicators is necessary to support and strengthen ecologically sustainable management. Accurate and timely information on forest biodiversity is necessary to assess the conservation status of forest ecosystems and to support management at the stand and landscape level. Furthermore, microhabitats have recently attracted the attention of scientists as indicators for monitoring forest biodiversity, with a complementary role compared to common indicators such as deadwood and large trees. Considering that the use of biodiversity indicators in forest monitoring has increased in recent decades as a tool to support forest management, this upcoming Special Issue on “Biodiversity Indicators for Ecological and Sustainable Conservation in Forests” seeks original research papers on the conservation status of forest biodiversity at the stand and landscape level.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
