

## Special Issue

# ESG-Driven Sustainable Green Economy: Innovation Management and Policy

### Message from the Guest Editors

This Special Issue focuses on the problem of how to build sustainable production and consumption patterns. The unsustainability of production and consumption patterns has become a major global challenge. Although there is some literature on sustainable production, responsible production, and sustainable consumption, it is relatively scarce and lacks specificity and systematicity. Therefore, the purpose of this Special Issue is to explore this problem from a systematic and comprehensive perspective through seven specific themes, including the following: Platform Innovation; Responsible Innovation; Green Innovation; Sustainable Supply Chain; Recycling of Waste Products; Promotion of New Energy Vehicles; Environmental, Social, and Governance (ESG). By delving into these seven themes, this Special Issue aims to fill gaps in the existing literature and provide new theoretical and empirical research. It seeks to offer valuable insights and recommendations for both academia and industry, with the hope that these studies will promote the establishment of more sustainable production and consumption patterns and drive the global transition to a green economy.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
