

## Special Issue

# Enhancing the Sustainability of Healthy Ageing and Long-Term Care through Innovations

### Message from the Guest Editor

Globally, we have seen several strides forward in improving life expectancy at birth and later ages and adapting new long-term care models. However, there remain gaps in long-term care models and provisions and in understanding the meaning of healthy ageing among different groups and individuals. At the same time, there is increased attention regarding the potential value of innovations and technologies as a means of sustaining health and effectively addressing some of the long-term care demands.

This Special Issue welcomes articles that address the intersectionality of ageing, health, care and innovations. Papers might focus on two or more aspects and can be either conceptual, implementational or evaluating. We welcome articles that examine and present new concepts or theoretical models, evaluate innovative interventions or policies or discuss the challenges and facilitators of implementing different approaches. This Special Issue particularly welcomes articles that address the diversity, inequalities and unmet needs of various groups of older people across the globe.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
