Special Issue

Tropical Rivers and Wetlands: Impacts, Hazards, Conservation, and Management

Message from the Guest Editors

The environmental pressure on tropical rivers and other freshwater wetlands has increased rampantly during recent decades. In this Special Issue, we intend to address the multiple environmental drivers triggering impacts on tropical water resources. The Special Issue intends to cover contributions on how human activities and climate change impact fluvial basins, freshwater wetlands, and river functioning. Emphasis will be given to hydrological, hydro-geomorphological, hydrochemistry, geospatial monitoring, river restoration, modelling, and hydro-ecological research. The issue will focus on scientifically sustained results on water resources management and sustainability planning, comprising a collection of articles aiming to solve tropical rivers' ongoing and future environmental challenges. riginal research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- Tropical rivers and wetlands hydrology, ecology, and geomorphology.
- LULC in tropical basins and wetlands.
- Landscape ecology of tropical rivers and wetlands.
- Tropical water resources.
- Management and conservation of tropical wetlands and rivers.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
