Sustainable Management of Phosphorus: Recent Trends, Advances and the Way Forward

Message from the Guest Editors

The importance of the sustainable management of phosphorus (P) for global, regional, and local food and water security is well known. Numerous studies over the past decade have adequately assessed the sustainability challenges for phosphorus and identified the reasons for inefficient management in all systems of the anthropogenic P cycle, starting from the mining and ranging to fertilizer production, agricultural (crop and livestock) production, food consumption, waste management, and water bodies.

We encourage submissions of both original research and critical review articles that address, but are not limited to, the following topics:

- Recent advances in phosphorus sustainability strategies or technologies;
- Phosphorus nexus with nitrogen, water, and/or energy for sustainable management;
- Emerging/future challenges of phosphorus sustainability and mitigation measures;
- Progress in social movements, national and international initiatives, or platforms towards phosphorus sustainability.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
