

## Special Issue

# Aquatic Plants as Bioindicators of Trace Metal Pollution

### Message from the Guest Editors

Trace metals are among the hazardous, non-degradable pollutants associated with human activity, and they accumulate in soil, sediment and living organisms, posing a serious threat to the environment and humans. Therefore, addressing the problems of aquatic pollution and monitoring is crucial in view of developing management as well as protection strategies and has become one of the top priorities for sustainable development.

Due to fluctuations in trace metal concentrations in water, aquatic ecosystems are particularly difficult to reliably monitor using physicochemical analyses. Trace metal accumulation in aquatic plants has been frequently studied, providing the basis for the development of numerous methods of bioindication, and various species of aquatic macrophytes are considered good bioindicators.

This special issue aims to discuss new research directions in different aspects of using aquatic plants in the biomonitoring of trace metal levels, fates and impacts on the environment. **Keywords:**

biomonitoring  
heavy metals  
macrophytes  
aquatic contamination  
water quality  
bioaccumulation  
indicator species  
pollution indices

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
