

## Special Issue

# Sustainable Production, Consumption, and Policy Applications of Life Cycle Assessment

### Message from the Guest Editor

Dear Colleagues, The UN 2030 Agenda for Sustainable Development provides an urgent motivation for the development of data-driven assessments of the most efficient ways to meet the Sustainable Development Goals. With its decision-oriented, consequential focus, life cycle assessment can provide important contributions to this, especially when broadened to include both the beneficial and detrimental impacts on the natural, manufactured, human, social, and financial resources. It is particularly important to ensure stock and flow consistent modelling, applicable across both business and government decisions, and at the level of products, projects, and organisations. We welcome papers that report on the theoretical developments or practical implementations that contribute to meeting these challenges.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
