Psychological Benefits of Walking or Staying in Forest Areas

Message from the Guest Editor

In a COVID-19 or post-COVID-19 society, coexistence with nature and the benefits of nature will take on an even more important role as the stress stemming from the emergence of new infectious diseases and the spread of psychotic depression become a growing social problem. Research on the effects of walking and staying in forests and parks will therefore play an important role in improving mental health and preventing or improving mental illness. The purpose of this Special Issue is to identify the psychological effects of walking and staying in the forest and how they contribute to the improvement of mental health and the prevention or improvement of mental depression, which will be pivotal to a society coexisting with COVID-19.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA
