

Special Issue

Sustainability of Public Policy and Health Economics

Message from the Guest Editor

This special issue will present research papers that assess the sustainability of public programs, health care systems, and health economics. Sustainability can include ongoing financial support, continued stakeholder interest, active participation of providers and patients/clients, and political input that is not disruptive. Sustainability is particularly important to vulnerable populations either due to socio-economic status, geographic remoteness, and limited number of providers. These are issues that are germane in both developed and developing countries. Authors evaluating sustainability for health care programs and policies can be either preventative or curative in nature, but in either case it is incumbent upon authors to apply concepts from health care economics to provide additional support for the benefits of sustaining such programs and/or policies. Continuing policies/programs often include positive economic analysis and it is relevant for authors of submissions to include such an analysis. Papers that will be considered include original research, literature review papers, and policy analysis.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
