

## Special Issue

# Scientific Advancements for an Innovative Agri-Food Supply Chain towards the 2030 Sustainable Development Goals III

### Message from the Guest Editor

Given the success of the first volume of the Special Issue “Innovative Agrifood Supply Chain in the Post-COVID 19 Era” and the second volume “Prospects Challenges and Sustainability of the Agri-food Supply Chain in the New Global Economy II”, we are now proceeding with the third volume of the Special Issue.

In this third volume of the Special Issue, the agri-food supply chain is the focus, looking at the goals for the year 2030. Creativity, knowhow, research and technology, and financial resources of all aspects, including food, are necessary to achieve the SDGs. Emphasis is placed on high-quality original contributions and reviews regarding the sustainability of the food chain, which can be derived from research results on the achievements, pathways, innovation, and performance of all aspects of the food chain invited for submission. They can include research on food-choice motives by consumers, new technological achievements on food and food processes, innovative new foods, food safety, environmental impacts and conservation, including eco-innovation solutions.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
