# Analytical Chemistry in Food and Beverage Research

### Message from the Guest Editors

Analytical chemistry techniques are used to provide essential details on the chemical composition of food and drink, which is crucial for ensuring that the entire food and beverage industry complies with standards of food composition and quality in addition to providing the manufacturer with the possibility to declare nutritional information. One of the main tasks of analytical scientists in the food and drink industry is quality control. In addition, a better understanding of food ingredients and how they interact can lead to the development of new products.

In addition, analytical methods are required to detect contaminants, and the analysis of allergens in food and drink is gaining increasing importance. The constantly changing market requires food scientists to continuously develop new or more sensitive methods to meet the manufacturers demands. Analytical techniques are also needed to test the authenticity of specific food components.

We invite all specialists and researchers working in this field to submit scientific articles in which analytical chemistry is applied to the analysis of foods and beverages.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
