

Special Issue

Remote Sensing Applications on Environment Resources and Natural Hazards

Message from the Guest Editors

This Special Issue focuses on the application of remote sensing methods for the assessment and management of environmental resources and natural hazards. In recent years, remote sensing has been widely used due to the large amount of data generated globally from an increasing number of sensors and the ability to analyze areas that are located in remote places. Due to their higher accuracies, remote sensing methods can be used for the identification and assessment of natural resources that will lead to the proper management of the latter and improving the environmental conditions. When applied to natural hazard processes, these remote methods could be appropriate for risk assessment and the subsequent development of early warning systems.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
