

Special Issue

Recent Advances in Geotechnical Stability and Technological Applications

Message from the Guest Editors

Since the father of soil mechanics, Karl Terzaghi, gave engineers a basic understanding of soil mechanics and behavior in 1925, the problem of geotechnical engineering has gradually received increasing attention. However, the stability of geotechnical engineering has been an important civil engineering problem for nearly a century. In recent years, with the rapid development of science and technology, there have been significant advances in both numerical analysis and test methods in geotechnical engineering. Most of the general geotechnical design is not a problem. However, it may be that the over-exploitation of resources has exacerbated global warming. The impact of extreme weather has gradually increased over the past two decades. Therefore, the sustainability of geotechnical projects and the timeliness of disaster prevention have gradually received attention. Based on the above factors, this Special Issue aims to publish high-quality research articles as well as reviews that seek to address recent advanced developments and applications in geotechnical safety, sustainability, and uncertainty.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
