

Special Issue

Recycling Materials for the Circular Economy

Message from the Guest Editors

Dear Colleagues: Each year, about 90 billion tonnes of primary materials are extracted and used globally, with only 9% being recycled, leading to the depletion of non-renewable natural resources. A circular economy model considers preventing waste (material, pollution, energy, water, etc.) at the beginning by adopting responsible manufacturing/production options, and incorporates waste into the system. Lower wastage of materials, more commercially and environmentally sustainable system.

This Special Issue focuses on the recycling phase of the circular economy, at any phase of a system, aiming to reduce waste generated at the end. It aims to cover optimized design solutions that can ensure economic and environmental efficiency. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but not limited to) the following:

- Resource recovery and recycling;
- Sustainable construction materials;
- Water use efficiency;
- Energy efficiency/recovery;
- Carbon-neutral processes and carbon offset;
- Zero waste;
- Emission reduction;
- Life cycle assessment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
