

Special Issue

Reliability and Sustainable Risk Management of Construction Process and Projects

Message from the Guest Editors

Risk is a key element in the construction process. Each construction project is unique, sometimes requiring an interdisciplinary approach due to the presence of various factors. These are key factors for the success of a project in a sustainable environment. Failure to keep to deadlines and remain in the planned budget are important for all participants of the investment process. However, with the increase in the complexity of facilities and the complexity of construction processes, a methodical approach to sustainable risk management at both the planning and implementation stages, as well as in the life cycle of the building, is needed. The development of risk analysis methods presents an interesting evolution of concepts, methods, techniques, hybrid solutions, as well as different cases. This Special Issue provides a platform for presenting the latest occupational safety research and the progress of risk analysis in construction processes and projects. Review and application articles based on the verification of practical applications in the area of construction process and sustainability are welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
