Special Issue

Resilience to Earthquake Hazard: Assessments and Frameworks

Message from the Guest Editor

The risk assessment studies try to predict the response of urban systems to natural hazards and to evaluate their preparedness to sustain, respond and recover with the aid of different parameters and tools. It has been noted that the general public is not adequately informed about the possible consequence of a stronger earthquake, which might damage buildings, cut transport lines for medical help and food supply and resulting in long lasting damage. This Special Issue is gathering the contributions dealing with resilience studies of cities and urban systems in the case of earthquake treatment in earthquake prone regions. It tries to collect the existing knowledge and gather new research ideas to develop the tools which enable the quantification of the most needed measures which could deal with realistic resilience assessment from architectural, urban, engineering, technical, economic or social points of view. Especially welcomed are papers which try to determine how to best assess the resilience of urban systems, taking into account all of their components, i.e., both the physical components and the social components, as well as the dynamic interactions between them.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
