Special Issue

Reuse of Waste Materials in Road Construction

Message from the Guest Editors

Waste material has increased owing to the rising population, leading to environmental pollution.

Researchers have explored the potential uses of waste by-products to reduce environmental pollution, lower costs, protecte natural resources, and finally, develope sustainable cities and communities. Road construction constitutes a main field in which waste materials can be employed in massive amounts due to the large-scale earthwork required in constructing pavement, base, subbase, and subgrade layers.

This Special Issue aims to explore the applicability of waste material in road construction. Topics include, but are not limited to:

- Soil stabilisation using waste materials:
- Waste materials in asphalt and concrete pavements;
- Development of new geocomposite using waste byproducts;
- By-product self-sensing geocomposites;
- Technical and economic comparisons of waste byproduct geopolymers with traditional stabilisers, stabilisation of waste by-products with additives;
- LCC assessment of waste by-product geocomposites;
- Reviews on application of waste by-products in road and railway construction, soil stabilisation, and pavement materials.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
