

Special Issue

Operations Research for Sustainability in Logistics and Supply Chain Management

Message from the Guest Editor

Supply chains must optimize their strategies to achieve sustainable business goals, including economic, environmental and social aspects within well-known Triple Bottom Line (TBL). The 2030 Agenda for Sustainable Development adopted a new set of SDGs to end poverty and improve the prosperity of people around the world. Logistic and supply chain decisions must be aligned with the SDGs from different perspectives. Recently, several studies have addressed supply chain and logistic problems due to their importance for the success of companies. Different Operations Research methods have been used to analyze the impact of several decisions within supply chain management environment, including heuristics, metaheuristics, machine learning, metaheuristics and exact approaches. The Issue invites academics, researchers and practitioners to contribute with original research, reviews and applied research for sustainability according to the TBL in Logistics and Supply Chain Management assisted by OR techniques. The Issue contributes to discussing effective logistic and supply chain management methods by adopting various sustainable aspects, trends and perspectives within SDGs.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
