

Special Issue

Sustainable Management of Power Supply System

Message from the Guest Editors

This Special Issue is envisioned as an opportunity to conduct research on the sustainable management of power supply system concerning both conventional power systems and microgrid in standalone, grid-connected, remote and hybrid operation mode. Integration of renewable energy technologies and electric vehicles and incorporating various types of energy storage technologies pose crucial challenges in managing the modern-day power supply system. Simultaneously, a digital transformation is occurring across the power and energy value chain, starting from the generation, to distribution, and all the way to the end-use electricity supply for residential, commercial and industrial consumers. It is now essential that the electrical power sector recognizes the contributions of the emerging technologies that would facilitate sustainable and intelligent management of modern-day power supply systems. In this context, it is necessary to address different research gaps. Hence, We believe that the formulated solutions to ongoing problems and the results obtained in the articles published in this Special Issue could have a meaningful impact on energy resource development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
