

## Special Issue

# Sustainable Management of Semi-aquatic Ecosystems

### Message from the Guest Editor

Semi-aquatic ecosystems are unique as they are ecotones that have characteristics of both the adjacent aquatic and terrestrial ecosystem. As ecotones or transition zones, these ecosystems have ecological and biophysical gradients. Their uniqueness leads to high biodiversity and many ecosystem services. This is the reason they have been utilized for thousands of years and why many are heavily degraded. In this Special Issue emphasis will be given to riparian areas, wetlands and deltas. These areas face constant pressure due to many anthropogenic factors and, especially, agriculture and urbanization. Many of the ecosystems have been cleared for agricultural activities while most of the most population lives in or along riparian areas, wetlands and deltas. Their restoration and conservation is a priority worldwide since they are essential for human well-being.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
