Special Issue

Soil Fertility and Plant Nutrition for Sustainability

Message from the Guest Editors

With increase of population growth, the demand for food is escalating and famers are compelled to grow several crops on a single piece of land—a farming practice commonly knowns as intensive agriculture. Nutrient management is often challenging under intensive agriculture, since the rate of nutrient harvesting is higher than that of nutrient supplementation. Although a portion of the nutrients are supplemented, these nutrients are not applied in balance with the soil nutrient demand. A few nutrient elements in particular are applied in large quantities, while other limiting nutrient elements are not applied, resulting in a low use efficiency of the applied nutrient elements. We encourage submission regarding:

- Nutrient application methods and their relative performance under intensive agriculture;
- Nutrient supplementation approaches and means with focus on balanced fertilizer application;
- Soil nutrient management through altering cropping pattern, and by crop rotation;
- Special application of nutrients including fertigation, deep urea placement, etc.;
- Use of bio/inoculant fertilizers singly or in combination with chemical fertilizers.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
