Special Issue

The Impact of Soil Microbiome Capability, Nutrient Bioavailability, and Plant Resilience in Sustainable Agriculture

Message from the Guest Editors

Global climate change, shifting land-use, and the intensification of agriculture are increasing crop stress caused by drought, salinity, herbivores, and pathogens. Emerging social and regulatory factors have motivated interest in the development of sustainable agriculture, which can be obtained by the implementation of green technologies with the capacity to protect crops from exposure to potential damage caused by various abiotic and biotic stresses. For instance, this can be achieved by breeding plant genotypes with specific traits that can survive disease or terrible environmental conditions as well as applying soil amendments such as compost and seed meal to limit the proliferation of soil-borne disease and changing nutrient cycling in agro-ecosystems. Additionally, plant-associated microbial niches, especially rhizosphere microbiome possess members, that are able to stimulate plant hormone and immune responses, increase micronutrient availability and shield plants from diseases by producing secondary metabolites with antibiotic or antifungal properties.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
