

Special Issue

The Role of Soils in the Environment

Message from the Guest Editor

Soils provide important ecosystem services. Among these are provisioning of food and fiber production, pollutant mitigation, supporting nutrient cycling, regulating climate and water quality, and contributing value to economy and culture. In this Special Issue we invite papers which focus on the role that soils take in regulating environmental processes at any spatial and temporal scale. Submissions may include manuscripts on soil management for sustainable agriculture and food quality and nutrient density, pollutant mitigation, reduction of climate change gas emissions, climate change resilience, soil biodiversity, and mitigating the effects of urbanization. For further reading, please visit the [Special Issue website](#).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
