Special Issue

Strengthening the Circular Economy: The Reuse of Agri-Food Waste

Message from the Guest Editor

A modern view of our lifestyle increasingly requires efforts to reduce our impact on the environment. In agrifood chain, development of models that exploit production waste to ensure the strengthening of bioeconomic approaches to production systems are needed.

Circular approaches are considered capable of ensuring systemic view that involves every phase of agri-food production and identifying circular economy strategies at every stag. Here, scientific research can offer solutions by developing models of waste management of all types to ensure reuse or regeneration. Sustainable bioeconomy works toward renewable biological sources, reducing emissions along the entire supply chain, and encouraging an overall decrease in consumption through resource efficiency, which covers the production phase and considers waste prevention and recycling.

This Special Issue aims to collect studies focus on strengthening the sustainability of food production chains, while following principles of agroecology, develop models of waste management based on sustainability. We welcome contributions from biologists, agronomists, architects, engineers, and physicians through multidisciplinary research.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
