

Special Issue

High Performance Supercapacitors for Green Energy Storage

Message from the Guest Editor

In 2003, Nobel Laureate Richard E. Smalley delineated that energy is the topmost problem faced by human society. Supercapacitors are one of the advanced energy storage devices, have been drawing significant attention lately, because of their unique advantages such as pulse power supply, rapid charging time, outstanding service life, and operational safety. Supercapacitors are emerging as a substitute power source over conventional batteries for a wide range of applications in electric vehicles, portable electronics, energy harvesting systems. However, the major challenge for supercapacitors is their insufficient energy density, which limits their more widespread applications. This Special Issue includes, but is not limited, the following topics: Green materials for energy storage; Nanostructured metal oxides as an electrode for supercapacitors; Supercapacitors for high-temperature applications; Chalcogens for energy storage applications; Carbon and related structure as an electrode material; Flexible supercapacitors; Polymers for supercapacitors

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
