Special Issue

Urban Mobility and Active Transport Transition

Message from the Guest Editors

The scope of this Special Issue is to shed light on how the transition toward active transport in urban mobility can be realized for the citizens of urban areas. Case studies displaying the successful transition to active modes, utilizing data that demonstrate this effect, are of interest. In addition, examples demonstrating the failure of a society to promote active transport modes and highlighting the reasons behind this failure are also highly relevant. Comparative studies between success and failure stories are considered to be highly instructive. A significant element considering the design of active transport is that it should be all-inclusive. The majority of studies, however, consider the population of healthy adults. Within this issue, studies focusing on different traveler categories, as opposed to only healthy adults, are invited. Examples include adolescents, elderly citizens, individuals with impairments, immigrants, and so on. Keywords

- Active transport
- Green transport
- Walking
- Cycling

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
