Sustainable Hunting Committed to the Biodiversity Conservation

Message from the Guest Editors

Hunting has played a relevant role throughout human evolution. At present, hunting is considered a recreational and economic activity, and is rarely necessary for survival. In this context, in a society increasingly committed to conservation, hunting must be managed, not only to ensure its sustainability, but also to conserve and promote biodiversity in the natural environments and agricultural systems in which it occurs. To achieve these objectives, the hunter and the game manager must rely on a solid base of scientific knowledge, playing a role in controlling the environment and its imbalances. In this way, such management will improve habitats and their animal and plant diversity. On the other hand, hunting activity represents an important economic and labor resource in rural communities. In addition, good management maintains and increases natural values, allowing a sustainable tourist exploitation of them, with consequent benefits of a harmonious sustainable rural development of these rural urban settlements.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
