

Special Issue

Sustainable Construction and Interior Comfort

Message from the Guest Editors

The “Long-term strategy from the EU” and the “Renovation wave for Europe” define the highlights for the construction and rehabilitation up to 2050. These documents state the need for rehabilitation to improve the energetic behavior of the built environment, as well as to pursue the need for interior comfort and better conditions to users, toward the decarbonization of the built environment.

To achieve these goals, it is necessary to adopt strategies and interventions based on sustainable construction principles: the use of renewable resources, the adoption of sustainable material and solutions, the respect and efficiency in the use of resources, maintenance, recycling or reuse of elements, and responsible management of residues and its valorization.

This Special Issue will outline key issues and challenges in the areas above. It is intended to show regional and national reality; difficulties in implementing these policies; and examples of good practices and solutions that address the sustainable construction and rehabilitation focused on building performance and interior comfort (not limited to thermal comfort).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
