

Special Issue

Sustainable Urban Development and Ecological Risk Management

Message from the Guest Editors

With the continuous development of urbanization processes, people's requirements and attention to urban ecological issues are also increasing. More and more people live in cities, which put pressure on the urban ecological environment. At the same time, due to the existence of ecological environmental risks such as climate change and urban environmental pollution, the contradictions and stresses between the urbanization process and ecological environment have become increasingly prominent. The current urban development is facing various problems, such as the lack of systematic optimal concepts of sustainable development. Therefore, the issue of urban ecological risk management and urban sustainable development is particularly important. We should think about how to promote the development of cities in the direction of resilience, sustainability, safety, and health in the future. In addition, we also need to establish a bottom-line thinking of urban ecological risk prevention and control, so that we can fundamentally promote the transformation of development models and expand the vision of sustainable development in response to the health and needs of people in the new era.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
