

Special Issue

Sustainability of Wine in the Face of Global Warming and Climate Change

Message from the Guest Editor

Changing climates will wreak havoc on the agricultural and human systems that have been developed upon regularities of geophysical, hydrological, and meteorological conditions. Challenging the capacities of wine growers to plan for and mitigate the existential threats of biophysical, economic, and social forces, shifting seasonal weather patterns and extreme events may yield catastrophic results at many scales.

Sustainability invites contributions from scholars in all disciplines on any topic that pertains to the sustainability of grapes, wine growers, wine makers, and wine regions (including their host communities) in the face of global warming and changing climates. This Special Issue seeks papers on topics ranging through disciplines including but not limited to physical and human geographical, economic, agricultural, sociological, and cultural matters; shifting patterns of production; environmental relationships; grape-growing methods; cultivars; changing varieties; environmental changes; shifting cultures; changing perceptions; changing consumers and markets; and local and regional economies, pertaining to the landscapes of wine.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
