

Special Issue

Sustainable Management of Agri-Food under COVID-19

Message from the Guest Editors

In our global world, food usually reaches the consumer through a complex network of interconnected links at national and international levels, starting from the primary producer, i.e., the farmer to transport and warehousing, to the retailer or caterer. This network (including all other activities directly or indirectly linked to food) is analytically described by the FAO as a "food system". However, one increasingly important element to be addressed for food systems is sustainability with respect to the economy, society, and environment. Disruption and turmoil can adversely affect these sustainability factors, and especially under the current COVID-19 health crisis, they can lead to devastating effects if matters are not quickly identified, and robust policies and collaborations are not put in place to mitigate potential adverse effects on the global food supply and systems. This Special Issue concentrates on this important topic and calls for high-quality papers directed towards developed economies, economies in transition, or developing economies. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
