

Special Issue

Sustainable Agri-Food Systems

Message from the Guest Editors

Contemporary food production systems are characterized by many opportunities and challenges related to sustainability. Sustainable agri-food systems require involvement across the value chain from farmers to the food industry, to food retailers and to consumers. The food environment also plays an important role. This Special Issue seeks contributions that highlight current developments in food system sustainability. How do farmers improve their operations towards more sustainable production? Does that differ depending on whether they are located in rural or urban areas? What is the status quo of food processing and production with regards to sustainability measures? What is the consumer demand for sustainable food production? Does that differ by product? How are these environmentally conscious consumers characterized? What are the future directions of food-system sustainability? This Special Issue seeks contributions that explore these types of questions. Theoretical and conceptual contributions are both welcome, as well as empirical investigations and case studies.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
