

# Special Issue

## Sustainable Field Crops

### Message from the Guest Editor

“Sustainable field crops” refers to agricultural practices that ensure high productivity without compromising on the environment, biodiversity, and quality of the products. Moreover, consumers’ benefits from using sustainably produced foods are much more than those of conventionally produced foods. The issues related with sustainable field crops include: greenhouse gas emissions, soil degradation and use of fertilizers, water use efficiency, alternative crops, introduction of legumes to farming systems, organic farming, pest management, and breeding for biotic and abiotic stresses. In this Special Issue, we invite you to present research results in all topics related with sustainable crops production and to discuss current trends and future prospects of progress in these fields. Survey papers and reviews are also welcomed.

- farming systems
- sustainable production
- environment protection

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
