

## Special Issue

# Economics Perspectives on Sustainable Food Security

### Message from the Guest Editor

We need sustainable solutions for our global food security without compromising the environment, food safety, and wellbeing of the population to achieve the United Nations sustainable development goals (SDG) including eradication of hunger and poverty, clean water, sustainable land use, responsible production and consumption, mitigating climate change, and sustainable life on land and water. Sustainable food security will require: (a) availability of food or sufficient food production, (b) access to food and ability to purchase food, (c) sufficiency in terms of nutrition including energy, proteins and micronutrients as well as safety, and (d) the stability and foreseeability of these conditions. The tools and strategies used to achieve sustainability in food security must align with environment protection, food safety, and public health and wellbeing of the population. This Special Issue explores and discusses the pathways and challenges of achieving sustainable food security and the tradeoffs between sustainability, food security and wellbeing by utilising economics frameworks, while being receptive to interdisciplinary approaches.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
