

## Special Issue

# Public Health and Sustainable Health Management

### Message from the Guest Editors

In 2015, world leaders gathered at the UN General Assembly to set 17 Sustainable Development Goals (SDGs) to be pursued by 2030 for the sustainable development of mankind. These sustainable development goals, which pursue balanced development in all areas of the environment, economy, and society, will serve as a compass for resolving numerous crises that the present and future generations will face. The role and importance of these sustainable development goals are growing day by day in an era of complex crises such as the prolonged COVID-19 pandemic, the climate crisis and natural disasters, economic crises, and the extinction of species. In line with these times, this Special Issue intends to include any issues for “Public Health Sustainable Health Management” and related to society as a whole in order to lead our society to having 'better health'.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
