Special Issue

Sustainable Organic Agriculture

Message from the Guest Editor

Researchers and consumers are paying increasing attention to environmental and health issues, especially in the aftermath of the COVID-19 pandemic. Currently, available plant genetic resources are characterized by genetic uniformity, and are also selected in environments that never reflect organic agricultural conditions. Moreover, agronomic strategies often use a mainstream approach that focuses on resolving a single issue in an agro-ecosystem (e.g., pests, soil fertility, diseases). There is an urgent need to find feasible solutions to organic agriculture problems by promoting crops with improved traits that make them more adaptable to different environmental conditions and to climate change scenarios. Furthermore, agricultural systems also need to be redesigned, by identifying technical practices, based on the promotion of functional biodiversity and associated ecosystem services. This Special Issue is thus focused on the new challenge for organic agriculture: breaking the monoculture nature of farming systems by adopting diversified plant genetic resources, sustainable farming systems, and a new innovative concept of quality.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
