Sustainability and Risks in Construction Management

Message from the Guest Editor

The planning and effective management of construction processes are extremely important for success in the construction sector. Activities in the construction sector are inherently risky, due to the objects, their size, the processes (initiating, planning, and executing), members and the environments. Sustainability must be included in risk assessment processes. Traditionally, decision-making process needs to consider not a single but several different criteria; therefore, multi-criteria decision making (MCDM) approaches and other decision-making methods are usually applied. When evaluating the attributes of a problem, sustainability should be taken into consideration, as well the factors that influence the efficiency and value creation of the decision process. Assoc

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
