

Special Issue

Sustainable Wastewater Management and Water Demand Analysis

Message from the Guest Editors

Dear colleague, Water demand is the driving force behind the dynamics of a water distribution system (WDS) and its correct characterization or the ability to forecast it could be of help for decision makers in WDS design/management analysis. Moreover, for sustainable wastewater management, it is essential to evaluate the possibility of reusing the water resource; it is important to consider that the wastewater contains mineral nutrients and organic matter that represent valuable resources in agriculture. The organic matter is also a possible source for energy production. The Special Issue of *Sustainability* “Sustainable wastewater management and water demand analysis” aims to cover recent advances related to the urban water cycle.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
